

# Effect of GEANT Bug on High-MET QCD events

Over half of  
my selected  
events have  
at least 1  
track with  
Geant Bug

# Geant Bug Particle vs. MET

Get genParticle  
matched to bad  
Track  
Plot  
 $\Delta\phi(\text{genParticle}, \text{MET})$

# GenParticle ET vs. DET(gen-rec jet)

- Find closest gen, rec jets to buggy generator particle
- Calculate  $E_{\text{gen}} - E_{\text{rec}}$
- Plot vs. Gen Particle ET

# # of bugs vs. ptHat

- Bug is dominant contributor for low ptHat
- high ptHat dominated by resolution effects?

# A few event displays from buggy events

- Orange = generated jets
- Red = reco'd jets
- Blue = reco'd MET
- Black dashed lines = ET of buggy particles
